

FIGURE 1 | DYNAMIC GROUNDWATER REVIEW SCREEN

A 3D state-variable mechanism, not a site-scale hazard map

KEY MECHANISM

recharge → shallower WTD → P_{liq} ↑

depletion → deeper WTD → P_{liq} ↓

subsidence + water-security audit

The scientific contribution is a dynamic groundwater state-variable screen. It flags where a static water-table assumption becomes stale; it does not predict earthquakes, local damage, or engineering factor of safety.
