

Groundwater management moves a liquefaction-screening state variable

Regional storage driver -> water-table perturbation -> modelled probability change -> local follow-up gate

Evidence ladder used in this paper

NCP / Beijing	Punjab / Delhi / Lahore	Tokyo Bay / Yokohama	Mumbai-Bhayandar	JPL CRI
well + model anchor	depletion + subsidence	official rise sign	candidate only	auth boundary

Claim boundary: regional screening and triage, not site-specific engineering prediction or earthquake causation
