

Groundwater management moves a liquefaction-screening state variable

Regional storage driver $\rightarrow$ water-table perturbation $\rightarrow$ screening-index change $\rightarrow$ non-regulatory screening flag

Evidence ladder used in this paper

NCP / Beijing	Punjab / Delhi / Lahore	Tokyo Bay / Yokohama	Mumbai-Bhayandar
well + model anchor	depletion + subsidence	official rise sign	candidate only

Claim boundary: regional screening and triage, not site-specific engineering prediction or earthquake causation
